

- Jobless rate falls again in November
- Labour income rises 1.7% in third quarter
- Residential investment up 12.3%

Labour Force

- British Columbia's unemployment rate continued to tumble in November, dropping to 4.9% (*seasonally adjusted*), the lowest level since 1976 (the first year for which labour force estimates are available). The continued improvement in the province's job market occurred despite a significant increase (+0.6%) in the size of the labour force, as employment growth (+0.8%) was more than strong enough to absorb the net addition of 14,300 people who were either working or looking for work.

Full-time employment increased 1.5% in November, but there were fewer people with part-time (-1.7%) jobs. Self-employment, a strong source of job growth in October, fell back 2.1% in November. There were 2.0% more private sector jobs, but employment in the public sector was down for the sixth month in a row. Although the unemployment rate for those aged 25 and over edged up to 4.6%, young people (aged 15-24) were less likely to be unemployed. The jobless rate in this age group dropped 1.6 percentage points, to 6.9%.

Among the regions, jobless rates were lowest in Thompson-Okanagan (4.3%, 3-month-moving average) and Mainland/Southwest (4.4%) and highest in North Coast/Nechako (6.8%). Kootenay (-2.8%) and Northeast (-4.8%) were the only regions to see a net decline in employment, relative to the same period of 2004.

Data Source: Statistics Canada

- Canada's unemployment rate dropped to 6.4% in November, partly because there were more jobs (+0.2%) but also because the labour force shrank (-0.1%). Eight of the provinces saw unemployment rates decline. *Data Source: Statistics Canada*

The Economy

- Wages, salaries and benefits received by BC

workers advanced 1.7% (*seasonally adjusted*) in the third quarter after posting an even stronger second-quarter gain (+2.4%). The third quarter increase was equal to the national average and the same as in both Ontario and Quebec. Alberta led the provinces with a 2.4% gain. Manitoba (+0.5%) and PEI (+0.9%) were the only provinces where labour income rose less than one percent in the third quarter.

Data Source: Statistics Canada

- Investment in residential construction projects was up 12.3% (*unadjusted*) in the third quarter, compared to the same period last year. The investment growth was primarily driven by spending on new dwellings, particularly apartments (+26.4%) and row housing (+21.8%). Investment in new single family dwellings (+1.9%) and duplexes (+4.2%) was relatively flat. Acquisition costs, such as real estate commissions, increased a relatively modest 6.9% after rising by nearly a third (+32.5%) in the second quarter.

BC's third-quarter increase was nearly four times the national average (+3.2%) but fell short of the 22.2% growth seen in Alberta. Investment in Ontario was virtually unchanged (+0.6%) from the third quarter of 2004.

Data Source: Statistics Canada

- The number of British Columbians receiving regular employment insurance (EI) benefits dropped 6.1% to 47,690 (*seasonally adjusted*) in September. Nationally, the number of EI beneficiaries was down 3.0%, to 513,020. While Alberta (-12.3%) and Manitoba (-8.9%) posted the most significant decreases, the number of beneficiaries was down in most provinces.

Data Source: Statistics Canada

Tourism

- During the third quarter of 2005, Canada's in-

Did you know...

49% of British Columbians would most like to spend their European dream vacation immersed in historical culture, while 33% would rather be relaxing or sightseeing

Source: Ipsos-Reid Poll March 2005

ternational travel deficit fell for the first time in a year, as the deficit with overseas countries dropped to its lowest level since the second quarter of 2003. Canadians spent approximately \$1.3 billion (*seasonally adjusted*) more outside the country than foreigners spent in Canada, down \$174 million from the second quarter. The decrease in the deficit was mainly the result of less spending by Canadians in the US (-1.8%) and overseas (-5.1%). Spending by Americans travelling north of the border was also down (-2.7%) and as a result, Canada's travel deficit with the United States rose to over \$800 million for the first time in more than eight years. However, the deficit with overseas countries decreased considerably, as travellers from overseas increased their spending by 3.1%. During the third quarter, the value of the Canadian dollar gained over most major foreign currencies, including the euro, the British pound and the yen.

Data Source: Statistics Canada

- **More Canadians travelled to overseas destinations in the second quarter of 2005, registering a 13.6% increase over 2004's record-setting second quarter.** Travel to the United States was also up (+5.9%) from the same quarter last year. Business trips to the US increased significantly, with 15.7% more Canadians travelling south for work-related reasons.

The most popular overseas destinations for Canadians were the United Kingdom, France, Mexico, and Cuba. A 48.9% jump in trips to Italy was likely related to the funeral of Pope John Paul II and the installation of Pope Benedict XVI in April.

Data Source: Statistics Canada

The Nation

- **Canada's economy expanded 0.9% (*seasonally adjusted, chained 1997 dollars*) in the third quarter, as domestic demand for goods and services remained robust (+1.0%).** Business investment (+2.1%) continued to drive economic growth. Spending on machinery and equipment was up 3.0%, with a similarly strong increase in non-residential construction (+2.9%). Investment in new housing advanced a more modest 0.7%. Consumer spending on goods

and services continued to rise (+0.6%), but at a slower pace than earlier in the year. The external sector also contributed to overall growth, as exports (+2.5%) soared after slowing in the second quarter. However, this was offset by a 2.2% increase in imports, and a continued decline in the value of business inventories.

Corporation profits climbed 5.4% (*current dollars*), while investment income rose 5.8% in the third quarter.

Data Source: Statistics Canada

- **Canada's current account surplus with the rest of the world increased by \$4.4 billion (*seasonally adjusted*) in the third quarter of 2005, rising to \$9.3 billion, the third largest surplus ever recorded.** The spike in energy prices and the resulting record export values for energy products were the main contributors to the surplus. Foreign direct investment in Canada rebounded to \$13.7 billion, almost triple the amount in the second quarter. About 70% of the investment came from the United States and most was invested in companies in the energy & metallic minerals sector. Canadian direct investment abroad rose to \$11.8 billion.

Data Source: Statistics Canada

- **Canadian manufacturers' prices jumped 1.4% during the twelve-month period ending in October.** Petroleum and coal products (+24.6%) were again the major factor in the 12-month change. Prices for BC softwood lumber continued to drop, falling to 11.3% below the October 2004 level. Both interior (-10.6%) and coastal (-13.0%) lumber producers received less for their product than they had a year earlier.

Clarification

The November 25th issue of *Infoline* characterized the incidence of children living in families with incomes below the low income cut-off (LICO) as "child poverty". Statistics Canada has stated that the LICO is not a measure of poverty, but a comparative statistic that shows whether families are substantially worse off than the average.

Municipal Population Estimates 2005

The Province

Between July 1st 2004 and 2005 British Columbia's population grew by 1.25%. This represented an increase of 52,655 persons: from 4,201,867 in 2004 to 4,254,522 in 2005. The total population in Canada grew at a lower rate of 0.9% in the same period. Of the provinces, B.C.'s population growth in 2004-2005 was second after Alberta (1.62%). Ontario grew at 1.08%

The majority of the province's recent population growth was still due to strong inflows of immigrants from other countries. Over the period 2004-2005 (July 1 to July 1), B.C. gained a total of 34,735 persons through net international migration (45,282 total immigrants less 10,547 total emigrants). The second contributor to population growth for the same period was the net gain of 10,464 persons through natural increase (40,465 births less 30,001 deaths). BC also had a net gain in migration, of 7,456 from all provinces and territories, except Alberta where a loss of 202 was recorded.

Population Growth by Regional District

Regional Districts

Twenty-five of the total 28 Regional Districts exhibited a positive population growth between 2004 and 2005, while three Regional Districts experienced population declines. Of these three, declines were fairly small, with Fraser-Fort George showing the largest percentage drop at -0.6%. Collectively, only 780 fewer people were living in these three Regional Districts when compared to the previous year, with most of the decline in Fraser-Fort George.

Of the 25 districts that had population growth, fourteen showed a growth stronger than the provincial average of 1.25%. Greater Vancouver, home of more than half of the province's population, displayed a growth of 1.15% or 24,540 persons. This represented 46% of the provincial population growth, as opposed to 37% in 2003/04 and

Regional District	%Change	Growth	2005 Pop

48% in 2002/03. Sunshine Coast gained only 855 persons in the period, but showed the highest growth in percentage terms (3.08%) due to the much smaller population base.

Municipalities

There are a total of 156 municipalities for which population was estimated. In the 2004-2005 period, 109 municipalities demonstrated population growth while the rest either lost population or showed no growth. On July 1, 2005 the smallest municipality was Zeballos with 228 people, and the largest was City of Vancouver with 583,267 people. There were 76 municipalities that had a population of 5,000 or more people. Of those, Qualicum Beach showed the strongest percentage growth with a rate of 19% (or 1,404 people) (part of the growth was due to a boundary extension), while Surrey showed the strongest growth in terms of population with an increase of 7,275 persons (or 1.89%).

Municipality	2004-05 Pop Change		2005 Population
	%	Persons	
Vancouver, C	0.61%	3,551	583,267
Surrey, C	1.89%	7,275	393,137
Burnaby, C	0.63%	1,271	204,324
Richmond, C	0.15%	253	173,430
Abbotsford, C	0.54%	681	127,434
Coquitlam, C	1.61%	1,930	121,973
Saanich, DM	0.42%	457	110,387
Kelowna, C	3.39%	3,589	109,490
Delta, DM	0.53%	542	102,655
Langley, Township of, DM	2.48%	2,350	97,125

The top ten growth municipalities made up almost half (47.5%) of the province's population. The two largest municipalities, the Cities of Surrey and Vancouver, making up approximately 23% of the total BC population, demonstrated growth in 2004/05 that represented about one-fifth of the increase in B.C.'s population. Many of municipalities in the Greater Vancouver area, such as Maple Ridge, Langley and Coquitlam, showed strong growth in 2004/05. These so called

"bedroom cities" of the region have been growing faster than the GVRD as a whole.

Prince George and North Vancouver were the two municipalities that lost the most population over the period. There were 45 municipalities that lost population in the 2004-05 period, and of these, 33 had population estimated at under 5,000. Most of the areas that lost population decreased by less than two percent (35 of the 45), with 28 of these losing one percent or less.

Municipality	2004-05 Pop Change		2005 Population
	%	Persons	
Prince George, C	-0.87%	-678	77,148
North Vancouver, C	-1.23%	-583	46,759
Victoria, C	-0.48%	-375	77,369
New Westminster, C	-0.61%	-354	57,480
Smithers, T	-2.53%	-143	5,509
Kitimat, DM	-1.29%	-138	10,587
Houston, DM	-3.01%	-116	3,733
Oak Bay, DM	-0.50%	-92	18,313
Prince Rupert, C	-0.56%	-85	14,974
Gold River, VL	-5.50%	-79	1,357

Municipal estimates are calculated by the Population Section of BC Stats through a regional estimation model that has been developed and refined over the past 25 years. This model, which uses indicators of population change such as residential electrical connections and telephone line location information, has enabled BC Stats to produce relatively accurate population estimates without the high cost of conducting a census.

Knowledge of population growth and where it occurs is vital to the planning process. For this reason the Municipal and Regional District Estimates are an important tool for provincial and local governments in assessing current and future community needs.

The population estimates for 1996 to 2005 (as well as the estimates for 1976-1995) are available on the BC Stats web site: <http://www.bcstats.gov.bc.ca>
